

Key Benefits

- Dedicated experienced support team
- Easy fully managed backup solution
- Data securely stored off-site to multiple locations
- No capital expense or training required
- Data recoverable to any location with an Internet connection
- Quick and reliable data backup and recovery
- Retention policies to suit your company
- VMware, Exchange, SQL and Hyper-V support
- Scalable to meet your company's growth
- Full reporting and monitoring
- Straight forward pricing, no minimal commitment
- Unlimited agents at no extra cost, only pay for the data selected

Are You Protecting Your Business Data?

Business critical data backup and recovery.

For many businesses the realisation that their data backups and BCP (Business Continuity Plan) do not work or have never been implemented is often too late!

Loss of business critical data and services can be very costly to your business, causing loss of sales, affecting customer relationships and the need to pay staff that are unable to work. With the Managed Cloud Backup services from LeadTec, we protect your business critical data and systems from data loss and corruption. With the added benefit of backup's being stored off-site at no extra cost, your business could be up and running again from any location in the world should the worst happen.

Managed Cloud Backup explained.

Our managed backup solution utilises cloud technology allowing us to back up your critical data safely and securely over the Internet to multiple secure datacentres. By simply installing a backup agent on your devices we can securely backup your business data with full management and reporting options. All data is encrypted to military standards to guarantee your data is protected at all times. For larger data requirements the use of a USB drive or storage device may be required for the initial seed. This can be supplied if required with full support for initial data backup, all subsequent backups are then completed over the Internet. This type of backup is possible as our technology only backs up the changed data instead of complete files. Making the solution quick, reliable and low on bandwidth utilisation.

What is covered?

- Data and system backups
- Data restore and recovery
- Support and management
- Physical to virtual restores
- Regular reporting and monitoring

**For a free 30 day
no obligation trial.**

We will help you install your agents and back up your business critical data quickly and easily.

Why choose Managed Cloud Backup service?

Our backup solution is fully managed including setup and monitoring, giving you more time to concentrate and focus on your business. With our fully automatic reporting, you can quickly and easily review your backup strategy giving you the confidence your business data is safe and protected.

Should you need to recover your data quickly, you have full access to start any restore 24 hours a day. Our engineers are also on hand to help you get your systems up and running as quickly as possible if needed. And as our system is cloud based and always online, you never need to search for tapes or wait for long catalogue processes to complete before recovering critical data.

Questions and Answers?

- **What platforms and applications are supported for backup?**

The following platforms and applications are supported:

Windows, VMware, Microsoft SQL, Hyper-V, Network and Local file Shares, Linux and My SQL, Exchange

- **What is the retention policy for my data?**

The standard retention policy is 30 days, this however can be customised to suit your data requirements including 7 years and longer retention for financial and critical data.

- **Will backups affect my bandwidth (Internet speed)?**

Managed Cloud Backup is fully configurable to restrict bandwidth usage and schedules by device. This allows you to limit the amount of bandwidth used per device during working hours and out-of-hours. Enabling you to run faster backups during the night whilst restricting them during the working day, so not to affect users.

- **What happens to my data if I decide to use another vendor?**

All data will be retained within the retention policy until you cancel the service, giving you time to configure and test any new solutions. All cloud backup data can then be downloaded to the location of your choice before canceling your service if required.
