Do You Spend All Day Filtering Emails?

Email protection against spam and other mail threats.

If you are like the majority of companies within the UK you will have received your fair share of spam, phishing requests and other unwanted emails as well as virus infected attachments. These threats can be at worst a major security risk to your business or at least time consuming and annoying. By ensuring you have the correct Cloud based Managed Email Protection in place you will protect your business systems and improve productivity for you and your staff.

Managed Email Protection explained.

Our Managed Email Protection scans and monitors all inbound mail in the cloud to ensure any unwanted emails and potential threats are blocked before they even enter your environment. This type of protection is far superior compared to in house hosted solutions, or relying on desktop application. It also helps to reduce costs and capital expenditure.

By simply routing your emails through our Managed Email Protection, we can remove spam, phishing emails used to obtain private information and protect from viruses. Allowing only genuine and wanted emails to arrive in your mailbox, saving you time and helping to increase productivity. You also get the ability to append footers to every outbound or inbound mail enabling you to add a professional message or disclaimer to every email.

What is covered?

- Inbound and Outbound email filtering
- Full setup and configuration
- Every user has access to the cloud portal and desktop Notifier
- Email disclaimers for inbound and outbound mail
- Full management and reporting

We will help you ensure your business has the maximum protection in place.

Why choose Managed Email Protection?

With the ever increasing levels of unsolicited communications, virus threats and spoof requests masquerading as banks and well-known companies being received via email. A reliable and secure managed email filtering system is a must for any business these days to help protect against security threats and lost productivity.

Our Cloud based Managed Email Protection solution requires no capital outlay on hardware and software, or the need to install any agents on your clients or servers. Simply subscribe the number of users you wish to protect and we will manage the seamless migration of your emails over to our Managed Email Protection to start protecting your users and business.

Questions and Answers?

- **Can I adjust the filtering level if it is too aggressive and blocking valid emails?**

Yes. The filtering level can be adjusted to suit your business needs. The default level will work fine for most companies, but if you need to fine tune this, the filtering level can be adjusted.

- **How do I check if valid, or customers emails are getting blocked?**

All users have full access to the online portal to allow them to review blocked emails. You also have to option to install the Notifier software on your PC's and Laptop's to allow you to quickly review, release and whitelist blocked emails.

- **Do I have to create every user separately on the web portal?**

The Managed Email Protection service is capable of using LDAP for Active Directory integration to reduce management time and give Single-Sign-On to users.

- **Can I add an alias to my email address?**

Yes. You can add up to 5 aliases to every email account subscribed.
