Cloud Managed Backup, a solution where no data is neglected...

Cloud Managed Backup, a reliable backup and disaster recovery solution protecting your critical data, applications, and systems whilst providing a data recovery solution for your business continuity plan (BCP).

Our cloud backup provides the ultimate data recovery solution by leveraging cloud technology. Choosing our managed backup for your business will give a secure and reliable solution to automatically replicate and store all business data remotely in the cloud via any Internet connection. Reliable automated daily backups will ensure your latest data is always recoverable from our cloud platform. This is achieved through endpoint devices having a backup agent installed locally to allow easy transfer of all data, applications, and systems. Our solution only replicates changed data making it an efficient and low bandwidth backup option.

Leadtec's managed backup solution is fully monitored by our technical engineers and comes with client full reporting options, allowing full visibility of all your backup's activity and quick issue resolution.

For larger data seeding requirements, the use of a USB drive or network storage device may be required. This is supplied for your initial data backup with full support available throughout, all subsequent backups are then completed over the Internet.

Our managed backup solution will archive all your replicated data. With weekly, monthly, and annually archiving schedules in place, ensuring there is long term recovery points. All backups are transferred and saved to an external location - any unprotected systems or devices will not be covered.

In the event of a disaster, data recovery can be quick and simple, there will be multiple options for you to restore files to either the original location, alternative device, or a disaster recovery centre. (Not part of the solution.)

Why choose our managed backup solution?

- ▶ Regular data archiving - for long term retention.
- ▶ Regular reviews of the cloud backup's performance allowing infrastructure improvements when relevant.
- ▶ Automatic backups which are scheduled upto twice a day.
- ▶ Our backup solution provides an important part of your disaster recovery platform for your data in the event of data loss.
- ▶ Leadtec's managed backup solution ensures the highest level of security for data whilst being transferred and stored.

How secure is my data while being transferred and stored on the cloud?

Cloud Managed Backup - is one of the most secure backup solutions available on the market. At Leadtec we recognise that security is paramount to all businesses. That's why our managed backup solution is fully encrypted and password protected ensuring the backup platform always maintains the highest security level available while storing your data. Security is implemented from the beginning and achieved through end-to-end military grade encryption. The encryption converts all data into codes and symbols making it near impossible to decrypt if intercepted - by doing this safeguards all your crucial data from a possible cyber-attack. The data can then only be decrypted by a unique encryption key; only available to authorised users when access is required.

Key Features of Cloud Managed Backup:

Dedicated and experienced IT support team managing the backup platform and protection of your data.

Data securely stored off-site to multiple locations.

Data recoverable to any location via an Internet connection.

24/7 self-service access to your backup, ensuring quick recovery when required.

Unlimited agents at no extra cost, only pay for the data selected.

Online backup platform storing all you replicated data offsite.

Cloud Managed Backup
a solution designed to
make your business future
proof by offering a data
recovery solution.

Frequently asked questions:

What platforms and applications are supported for backups?

Cloud Managed Backup can support the following platforms and applications from: Windows, VMware, Microsoft, SQL, Hyper-V, Network and Local file Shares, Linux and My SQL, Exchange.

What's the retention policy for my data?

Our standard daily backups are retained for 30 days with a monthly archive. All archives are retained for the length of the service.

Is there any hidden costs?

The Cloud Managed Backup solution is a set monthly cost with no extra charges for the allocated storage allowance. This includes 500GB for computers and laptops and 1TB for servers. Additional data can be added at a set cost per GB.

Will backups affect my bandwidth (Internet speed)?

Managed Cloud Backup is fully configurable to restrict bandwidth usage and schedules by each device. This allows you to limit the amount of bandwidth used per device during working hours and out-of-hours. Enabling you to run faster backups during the night whilst restricting them during the working days.

What happens to my data if I decide to use another vendor?

All data will be retained within the retention policy until you cancel the service, giving you time to configure and test any new solutions before the transfer. All cloud backup data can then be downloaded to the new location. Once transferred successfully the service will be cancelled.

How quick is recovery time in the event of a disaster?

File recovery can be initiated instantly, followed by the restore, this will fluctuate depending on the speed of your Internet's bandwidth and the amount of files and data for recovery.
